

LTS SECURE SIEM & LOG MANAGEMENT

Effectively neutralize threats and suspect behavior with proactive intelligence

SIEM plus LOG MANAGEMENT as an integrated solution

- **TWICE THE CAPABILITY, ONE SOLUTION** provides all the power of an enterprise monitoring solution with a means to detect and prevent anomalous behavior based on historical and discovered patterns.
- **SINGLE PANE OF GLASS** sees asset alarms, events, availability, services, groups, notes and vulnerabilities under a central dashboard.
- **INCLUDES VULNERABILITY SCANNING** as well as IT Asset Discovery/Management and Network Flow
- **24/7/365 MONITORING:** includes all devices, servers, applications, users, data centers and infrastructure components using situational behavioral context.

Detect & prevent anomalous behavior based on discovered patterns

- **FORENSIC RISK ANALYSIS:** Receive real-time alerts on security or performance-impacting incidents; we provide actionable information, not just data!
- **INTEGRATES WITH YOUR EXISTING SOLUTIONS:** This includes Identity Management, Access Management and other data and security silos
- **AUTOMATE COMPLIANCE REPORTING:** Out of the box reporting configurations for HIPAA, PCI, FISMA, many more

You choose: on-prem or in the cloud

- **EASY DEPLOYMENT** Easily deploy, configure and manage; we've made it cost effective and fast to start generating results
- **SECURITY AS A SERVICE:** Don't have the manpower or expertise? Our team of security experts help you monitor, manage and/or advise on your security intelligence initiative.

LTS Secure technology offers advanced intelligence capable of synthesizing the underlying risks associated with complex distributed attacks on large networks. The integrated system considers the context of each threat and the importance of the assets involved, evaluates situational risk, discovers network inventory and distinguishes actual threats from the thousands of false positives. Our flexible and scalable solution works on public, private or hybrid clouds.

HIGHLIGHTS :

- Log Normalization to build any Co-relation Rules
- User Context Co-relation
- Advanced Security Analytics with base-lining
- Custom Dashboard on fly with KPI Counters
- SIEM for Cloud Infrastructure and Cloud Apps

ENHANCING SECURITY INTELLIGENCE THROUGH BETTER VISIBILITY :

Our SIEM/Log integration brings all the power of contextual and situational correlation incorporating:

- Risk mitigation data
- Correlation Risk metrics
- Vulnerability scanning
- Data-mining/Historical analysis
- Real-time monitoring results

LTS Secure SIEM transcends typical perimeter-based offerings. It's a next gen platform providing a unique and powerful out of the box solution:

This puts you in control to add what you need to better close security gaps in your environment. As such, it has more world-class, out of the box enterprise features and functions than any alternative on the market

We've made it easier and more cost effective to achieve your enterprise security goals

LTS Secure SIEM is tuned for high performance and scalability of many million events per day.
A partial list of LTS Secure SIEM features includes:

Features	Benefits
Compliance Automation	<ul style="list-style-type: none">■ Hundreds of canned compliance reports■ Advanced reporting wizard, and dashboard■ Forensic auditing console
Advanced contextual correlation	<ul style="list-style-type: none">■ Network and applications■ Events and flows■ Asset inventory■ Intrusion detection / Real-time attack identification■ Vulnerability assessment/database■ Reliable attack detection■ Drill-down risk oriented analysis■ Automated asset inventory■ Availability and resource monitoring■ Comprehensive incident management system■ Real-time analysis and reporting■ Automated network profile and inventory management■ Hierarchical, distributed architecture■ Pre-installed security and compliance directives■ Integrated wireless, host and network■ IDS/IPS Connectors for thousands of event sources■ Flexible and customizable dashboards■ Granular user managemen■ Search■ Real-time alarms
