LTS Secure's Cloud-Native SIEM

Discover and Prioritize Real Threats in real-time.

LTS Secure SIEM is a cloud-native security operations center (SOC) solution that automatically analyzes and correlates threat alert data to help SOC analysts more efficiently discover and resolve meaningful threats.

LTS Secure's Cloud-Native SIEM Capabilities

User and Entity Behavior Analytics (UEBA)

Security Orchestration, Automation, & Response (SOAR)

Asset Risk Scoring

Advance Threat Intelligence

Compliance Reporting

ML and AI based Alarm Analytics

Vulnerability Assessment

Advanced Correlation-based detection

Alarms Prioritization & Triage

- Limitless log Collection & Storage
- Detect any Complex Security Threat 3m 47s
- Enhanced Visibility of all cyber infra layers
- Fast & Effective Data Protection
- Advanced Insights

LTS Secure is an Integrated Security Platform (SIEM + UEBA + CASB + IDM) provider that enables continuous monitoring & detection of Threats, Vulnerabilities, Risk of IT Network, and Applications and by users in a single pane based on SOAR.

LTS Secure's Cloud-Native SIEM enables SOC team with

LTS Secures Next-Gen SIEM is capable of offering an effective and efficient means to monitor your network round the clock.

- Threat Intelligence & Log Correlation
- Notifications & Real time Alerts
- Analytics & CXO Dashboard
- Detection of Any Complex Threats
- Big Data Infrastructure with Infinite Scalability

LTS Secure's Cloud-Native SIEM with XDR

LTS Secure's SIEM with XDR, an integrated functionality delivers improved visibility with contextualization of advanced threats to assist with triage, investigation, and rapid remediation efforts.

	SIEM	XDR
 Domain coverage	Multi domain coverage: <ul style="list-style-type: none"> ○ Threat detection, investigation, and response (TDIR). ○ Compliance. ○ Centralized storage. 	Single domain coverage: TDIR
 Design approach	Designed for customization and "just in case" situations	Designed to be focused on efficient TDIR
 Data location	Typically assumes that the data needs to be centralized in the SIEM.	Typically assumes that data could be stored anywhere and/or doesn't need to be stored for the long term
 Delivery model	Can be on-premise, cloud-delivered or both.	Cloud-delivered.
 Storage requirement	Typically focuses on correlation based analytics	Typically offers machine learning based advanced analytics
 GTM motions	Typically replaces or displaces legacy SIEMs, CLMs and/or data lakes.	Typically augments legacy SIEMs, CLMs and/or data lakes.

LTS Secure's Cloud-Native SIEM Benefits

Empowering organizations with LTS Secure NXT-GEN SIEM with XDR & UEBA benefits with Flexible Integration to Augment your Security Stack

- Monitor logs efficiently and report suspicious events.
- Collect, normalize and analyze logs and ingest threat intelligence feeds directly.
- With customizable reports, present data in different ways to spot trends, patterns, anomalies etc.
- Adhere to various compliance legislations like GDPR, CCPA, HIPAA, PCI-DSS etc.

Empowering organizations with LTS Secure NXT-GEN SIEM with XDR & UEBA benefits with Flexible Integration to Augment your Security Stack

Understanding Threats

Monitor logs efficiently and report suspicious events from humongous amount of data generated and collected from various business processes.

Correlate Data

Collect, normalize and analyze logs and ingest threat intelligence feeds directly to understand real indicator of compromise (IOC) to further safeguard the network.

Present Data

With customizable reports, present data in different ways to spot trends, patterns, anomalies etc. and increase visibility and transparency within the network.

Compliance Guideline

Adhere to various compliance legislations like GDPR, CCPA, HIPAA, PCI-DSS etc. through custom SIEM reporting and safeguard data as well as organizations.
